- A. 45 taper is required at shuttle traffic controlled layouts with cones at 1m centres
- B. Cone spacing is the maximum permitted. Where geometry or any other site-specific reason
- dictates the spacing shall be reduced accordingly.

  The optimum lane width for all classes of vehicles is 3.3m. This may be reduced to a minimum of 3m. Below this, HGVs and buses must be marshalled past the works. The absolute minimum lane width, if only cars and light vehicles are present, is 2.5m. See Section 0.4.3.4.
